DEPI / RESEARCHVOICE AI / CHECKPOINT 4

Evaluation Monitoring Dashboard

OBSERVED SINGLE-DEMO SNAPSHOT • 26 October 2026 • No live clinical data

1	4.6 / 5	1	1
judge attempt	judge mean	soft warning	XLSX delivered

QUALITY AND OPERATIONAL SIGNALS

Measure	Observed result	What it measures
Independent evaluation	1 completed; 0 failures	Rolling evaluation snapshot, not full project history
Pass / needs review	0 pass / 1 needs review	AI judge results, not clinician confirmation
Five judge scores	5 / 5 / 5 / 3 / 5	Factual, groundedness, safety, format, bias
Judge-only latency	10.49 s (p95 in one-sample snapshot)	Does NOT represent total visit workflow time
Safety and alert handling	1 soft alert; 0 hard holds	Unresolved schema-name mismatch was flagged
Pre-Gemini blocks	0 in one-sample snapshot	Not evidence of complete PHI or injection prevention
Export outcomes	1 delivered; 0 failed attempts	Synthetic user-approved Excel delivery

BUSINESS KPIs / BASELINES & ACTUALS

KPI	Proposed target	Measured actual
Time per structured record	≤ 5 minutes	NOT MEASURED
Extracted field agreement	≥ 95%	NOT MEASURED
Manual correction rate	≤ 15%	NOT MEASURED
Approved XLSX delivery	≥ 95%	One observed delivery; benchmark pending
Researcher ease-of-use	≥ 4 / 5	NOT MEASURED

ALERT RULES Soft: judge failure, score ≤3, or unresolved extraction issues. Hard: safety or factual score ≤2, or critical safety flag. Hard export hold implemented but not shown live in provided evidence.

LIMITATION LangSmith currently logs a post-judge QA checkpoint, not every model call. Two independent human calibration scores, statistically meaningful KPI actuals, and full E2E scenario evidence remain pending.

SOURCE Telegram /monitor and /eval screenshots, soft-alert node JSON, LangSmith “Run created” output shared on 26 Oct; KPI targets from Batch 1 drafts.
